

Information Management for Microsoft 365

Background

Microsoft 365 delivers a powerful set of productivity and collaboration applications that have been massively adopted by large enterprises. While E3 and E5 both include varying degrees of native management functionality for basic use cases, most litigated and regulated enterprises apply dedicated governance, compliance and eDiscovery technologies to supplement Microsoft 365 limitations.

Singular Information Governance

As a Microsoft Gold Partner and Gartner Leader, ZL Tech brings 21 years experience in information governance to Microsoft 365. ZL Tech offers an Azure-based suite of solutions to apply seamless governance functionality across Microsoft applications, from a singular platform. Organizations can perform in-place management in conjunction with selective archiving of all Microsoft data sources, including Exchange Online, Teams, SharePoint, and OneDrive, as well as non-Microsoft data sources such as file shares.

Unlike any other platform, ZL Tech delivers unified information governance to enable:

- eDiscovery
- Compliance
- Records Management
- Privacy
- Analytics

Information Management for Microsoft 365

A Gartner Leader and Microsoft Gold Partner trusted by the world's largest, most regulated enterprises.

ZL Tech provides complete governance over Microsoft 365 data to meet the highest legal and regulatory standards.

Defensible.

- 100% capture of email messages via journaling and the most sophisticated range of compliance solutions for SEC 17a-4 and other retention and review regulations
- DoD 5015.02 certified records management solution, ensuring complete lifecycle control
- Fully certified SOC 2 Type II SaaS provider, meeting the highest standards of security, confidentiality, processing integrity and privacy

Comprehensive.

- Search, identify, and cull emails, files and the Microsoft ecosystem for eDiscovery, privacy regulations, and compliance using the industry's most sophisticated search
- Capture insight into documents through on-the-fly content and metadata analysis
- Apply both in-place and archive-based management, in Azure, on-premises, or hybrid

Trusted.

- Trusted by the Fortune 500
- Used by today's most regulated companies, including four of the top five banks
- A Microsoft Gold Partner—Microsoft's highest tier—recognized as a Leader by Gartner
