ZZ ZLTECH

ZL UA for eDiscovery

BY THE NUMBERS

11 billion+ documents able to be stored in one archive, all searchable and accessible with one click

90% decrease in eDiscovery collection times

1,000 times faster search than nearest competitor

1 second to return results of a million-record search

60 seconds to return results from a global search of 1+ billion records

ANALYSTS SAY

"A key differentiator is ZL's capability to deliver true end-to-end EDRM, which enables review and analysis of all the archive data 'in place' — without the significant delay and cost involved to export, duplicate, or move data to the right-hand side for review."

– *IDC*

ZL UA for eDiscovery is a powerful tool that enables firms to bring all their eDiscovery efforts in-house, significantly cutting time, money, and risk spent on outsourcing efforts. This solution is one of four modules unified within ZL UA, the flagship product of ZL Technologies. ZL UA provides the industry's only information management solution that seamlessly archives emails and files for storage optimization, eDiscovery, compliance, and records management—all on a single platform.

An in-house solution that puts your counsel in control

The power of our solution is rooted in its unified architecture, meaning data is never put at risk with constant importing and exporting to third-party eDiscovery tools. While other point solutions in the industry individually address issues surrounding eDiscovery, only ZL UA for eDiscovery is built upon the sophisticated architecture of Unified Archive, offering a completely end-to-end, in-house solution.

Save time, money, and risk

By saving time wasted on moving data from archives to review tools, money spent on expensive lawyers, and risk of losing crucial data while it is constantly imported and exported, you get an immediate ROI from purchasing one comprehensive solution.

Defend every action

Discovery Manager offers a complete audit trail listing every user and action associated with a document, allowing you to prove a digital chain-of-custody in court.

Search and refine faster

By saving time wasted on moving data from archives to review tools, money spent on expensive lawyers, and risk of losing crucial data while it is constantly imported and exported, you get an immediate ROI from purchasing one comprehensive solution.

ZZ ZLTECH

Innovative end-to-end capabilities

ZL UA for eDiscovery's sophisticated GRID architecture is enriched with several innovative tools, allowing your firm to proactively manage litigation requests and know more than the other side. Some of ZL UA for eDiscovery's user-friendly capabilities include:

Proactive eDiscovery offers true end-to-end eDiscovery, beginning with Information Management, to ensure that your firm is always prepared for any litigation request

Manage-in-Place saves valuable space by allowing users to preview documents without ingestion

Role-based Access Controls allow users to apply legal holds, save search criteria, and view documents at several levels including administrator, reviewer, and auditor

Preservation Notification Workflow notifies custodians to preserve documents until the notification is acknowledged

Early Case Assessment begins the minute a suit becomes likely

Search Preview gives an overview of what the search results would look like, excluding non-responsive items that would be costly to review

Histogram Analysis displays statistics for a number of dimensions (such as the number of messages by custodian, review status, and privileged documents)

Faceted Search culls items based on automatically-extracted "facets" (such as category, date, user, and custodian) that can be searched across in any combination

Concept Search enables users to conduct searches based on meaning, rather than keywords

Redaction allows information to be redacted, highlighted, and/or annotated

Automated capabilities reduce the risk of error

Real-Time Legal Hold is applied instantly for preservation orders organized by case

Retention Policies automatically coordinates written policies and held records

Attorney-Client Privilege automates special handling of privileged records

Write Once Read Many (WORM) technology that guarantees nontampering of the original document

Automatic Highlighting increases reviewer productivity by highlighting information so reviewers can quickly scan a document

Automatic Categorization automatically tags items and allows appropriate case administrators to sort, filter, and search through them

ZL UA KEY BENEFITS

UA Journaling System scans all inbound, outbound, and internal content such as e-mails, instant messages, social media data, Bloomberg, BlackBerry, e-faxes, and more.

Audit Trails logs every action performed on all data in the archive.

Auto-Categorization triggers review actions when scanned messages contain metadata properties or words/phrases that indicate a possible violation.

Built-In Reports generate reports relating to compliance actions and electronic data throughout the enterprise.

Pre-Review stops messages that violate particularly serious rules from leaving the organization and instead routes them to a review inbox.

Post-Review routes copies of flagged messages to a designated review inbox after they are sent.

User Management allows access to different components of Compliance Manager based on special roles and Privileges.
